Road freight transport

company size:

SME

headquarter

Via Ospedalichio snc
Zona ind.le Selci
06016 San Giustino
(PG)

main areas about expertise:

Freight transport for third parties and logistics

main offer:

Management of complex shipments made up of lots on the national territory with express timelines

A family business since 1989, today CSM is one of the prominent players in the transport and logistics sector of central Italy. We preserve the best features of our original imprinting, establish long-lasting relationships with stakeholders, pursue the objective of economic and financial stability for long-term plan and identify our reference values in ethics, innovation and social and environmental sustainability; in particular, we believe environmental and social responsibility represent the challenge of the future.

The growth of the company and its increased importance in the reference area, expand the responsibility that a company must assume towards all those who bear or share interests in their various capacities.

Awareness of this new condition declined in the last months of 2019 when CSM joined the first consortium with the purpose of creating an eco-sustainable supply chain, consortium ecoVprint, and embarked on a path to meet the standards for B-Corp certification.

CSM monitors its emissions with the technologies offered by PTV GROUP: it is equipped with a route optimization software, i.e. the PTV Route Optimiser ST by PTV GROUP for planning distribution and medium-long range routes, and the PTV Emissions Calculation technologies, specific for heavy vehicles, make the PTV xServer API a fundamental tool for calculating emissions integrated into the solution used by our logistics office for route optimization and shipment planning. Freight Sorting Center is certified by Quality Italia (Exclusive partner for Italy of Quality Austria certification body accredited by Accredia) according to ISO 9001: 2015 and to ISO 45001: 2018 standards.

Our main goal is to guarantee local businesses the transportation of their goods nationwide within 24/48 hours.

Our ability to achieve what has been stated is demonstrated by the affirmation of CSM in the Tender launched by Terex Corporation (www.terex.com) for the assignment of all national transport services; Corporate has chosen CSM as the sole partner for Italy.

Our fleet consists of over 200 vehicles; road tractors are 70% Euro 6 and the 8% are powered by LNG; continuous investments aimed at renewing the fleet have reduced CO2 emissions by 4% over the three-year period (2018/2020) (from 19.025g / ton Km in 2018 to 18.35g / ton Km in 2020) further compensated by the production of energy from plants photovoltaic systems installed on the roofs of the production units which contributed to a reduction of a further 4%. In 2019 CSM managed over 100,000 transports with an increase of 18% compared to 2018.
