(PG)

**main areas about
expertise:**

Cosmetics
Pharmaceutics
Hair Care
Fashion

main offer:

Printing of commercial material,
design and development of paper
and packaging material

For over 30 years CTS Grafica has been operating in professional printing and has become an important player in the typographic panorama of Central and Northern Italy.

Our headquarters are located in Città di Castello, a prestigious center devoted to quality printing since 1538, listing over 150 companies working in the sector.

CTS Grafica offers full consulting service for printing and paper converting: from the choice of materials, through the identification of appropriate production techniques, to the packaging and presentation of the project.

All processes are managed internally in order to keep all stages of production under control. The use of latest generation printing technologies and a long-standing professional experience generate results of unmatched quality, offering customized solutions in each sector: packaging, publishing, printed matter, paper converting, serigraphy, innovative and experimental supports.

We take care of the whole production cycle for the manufacturing of commercial material and paper converting or packaging projects:

- Design;
- Pre-press;
- Printing and production;
- Paper converting materials;
- Commercial materials;
- Packaging: die-cutting, assembly, gluing and packaging, fold and staple;
- Logistics: storage and distribution using external suppliers.

Our goal is to offer quality products by supporting customers right from the idea of the project and by accurately following their requests for the entire duration of the production cycle.

Finally, we are strongly committed to sustainability applied to materials, and we operate in two important areas at the same time:

1) Eco-sustainability of the product:
we invest in the research, development and introduction of sustainable systems and materials (e.g. use of FSC certified paper, recyclable and compostable paper);

2) Sustainability of the Supply Chain:
we are part of the first consortium for an eco-sustainable supply chain of Printing and Pop (ecoVprint) and we have embarked on a path to meet the standards for B Corp certification.
