company sector:

17.21.00
Manufacture of corrugated paper, cardboard and cardboard packaging (excluding pressed paper)

company size:

SME

headquarter

Loc. Coldipozzo
06012 Città di Castello,
(PG)

main areas about expertise:

Design and production of American packaging, small and large die-cuts, printed or not

main offer:

Design and sampling of the most varied types of corrugated cardboard packaging, production of large, small and very small batches in order to meet the needs of any customer, competitive prices, fast service, direct delivery

Since its foundation to present day, the "family and humanistic business" philosophy has modelled the vision of SAICO and, over the years, its distinctive elements have led SAICO to become a strategic partner in the supply of packaging to some of the main companies of the region:

- Design and sampling of the most varied types of corrugated cardboard packaging;
- Production of large, small and very small batches in order to meet the customers' needs;
- Price competitiveness;
- Fast service;
- Direct delivery.

The acquisition of new highly technological and automated "casemaker" lines made it possible to improve the production efficiency and the working conditions of employees who are no longer required to move loads manually, raising the company's already high standards of health and safety of our workers.

The increase in production efficiency together with our internal delivery logistics and the acquisition of ISO 9001 and FSC certifications have fostered the company's growth and expansion in Lazio and Emilia Romagna, where a commercial office was opened.

We are planning to expand the plant with additional 6000 square metres and to invest in state-of-the-art equipment providing a technology that we currently lack. This will enable SAICO to access the market of high definition printed packaging and most of all, to be recognized as a specialized and leading company on corrugated cardboard packaging.

Through rigorous material recycling system and the adoption of eco-sustainable products, we are committed to achieve environmental sustainability. We are part of the ecoVprint consortium and have embarked on a path aimed to meet the standards for B Corp certification.
